- **DEPLOYMENT:** Docker , Vercel , Render, Github

Projects

Airplane Backend & Flight Service System

(Backend Development Project)

A **Microservices**-based system with two services: one for **managing flights**, airports, and schedules, and another for **booking flights** with features like seat management, transactions, idempotency, and race condition handling. Built for scalability, with inter-service communication and structured for real-world reliability.

MiniVids – Video Reels Web Application

(Full Stack)

Built a lightweight reels app with **Next.js**, **Tailwind CSS**, and **ImageKit**, enabling users to upload and view short videos with optimized media delivery. Implemented features like infinite scrolling, authentication with next-auth, and seamless video streaming for a smooth user experience.
